Rubber Lining Systems

APS’s Coatings & Linings Division provides application of factory and site based specialist coatings and linings to the oil, gas, water and power industries. Rubber Lining Systems have a wide application usage in the water production, chemical production, storage and transportation industries and can be installed either at site or in our factory facility.

Features
- Excellent Abrasion and Impact Resistance
- Extremely Flexible Liner
- Good Chemical Resistance
- Very Durable
- Also Food Grade Certified (Specific Rubber Types)

Applications
- Internal Hydrochloric Acid Tanks
- Internal Seawater Tanks (Concrete & Steel)
- Internal Scrubbers
- Internal Sand Filters / Seawater Filters
- Internal Slurry Tanks
**Installation Guidance**

Rubber Lining Systems are applied on a well prepared surface and installed by a qualified crew, using the right equipment. After application of an epoxy primer and a bonding agent the rubber is hand applied and APS installs an extensive range of hard and soft, pressure and atmospheric cured sheet elastomeric compounds, including: natural rubber, ebonite, chlorobutyl, polychloroprene and PVDF. The thickness of the rubber lining system normally varies between 3mm and 6 mm depending on the exposure conditions and specifications.

**Milestone projects executed by APS:**

<table>
